For two-letter codes and other abbreviations, refer to the "Guidance Notes on Codes and Abbreviations" appearing at the beginning of each regular issue of the PCT Gazette.

(54) Title: METHOD FOR POSITION NOTIFICATION

(57) **Abstract:** The method and system is for determining a position and time with a dynamic code (22). The method provides a time device (12) that shows a time (19) and a date (17). The time device (12) has a unique identification number (24). The dynamic real time code (22) is generated by combining the time (19) and the date (17) shown by the time device (12) and the identification number (24). The code (22) is packed and sent to a receiver (30). The receiver unpacks the code and determines the sending time (19) and date (17) and the identification of the time unit (12).
